

1.3 Solving Equations
Get the variable by itself.

PEMDAS gives right order of operation

e.g. $4x - 10 = 12$

Doing the opposite of everything else.

$$4x - 10 = 12$$

$$x = 22/4$$

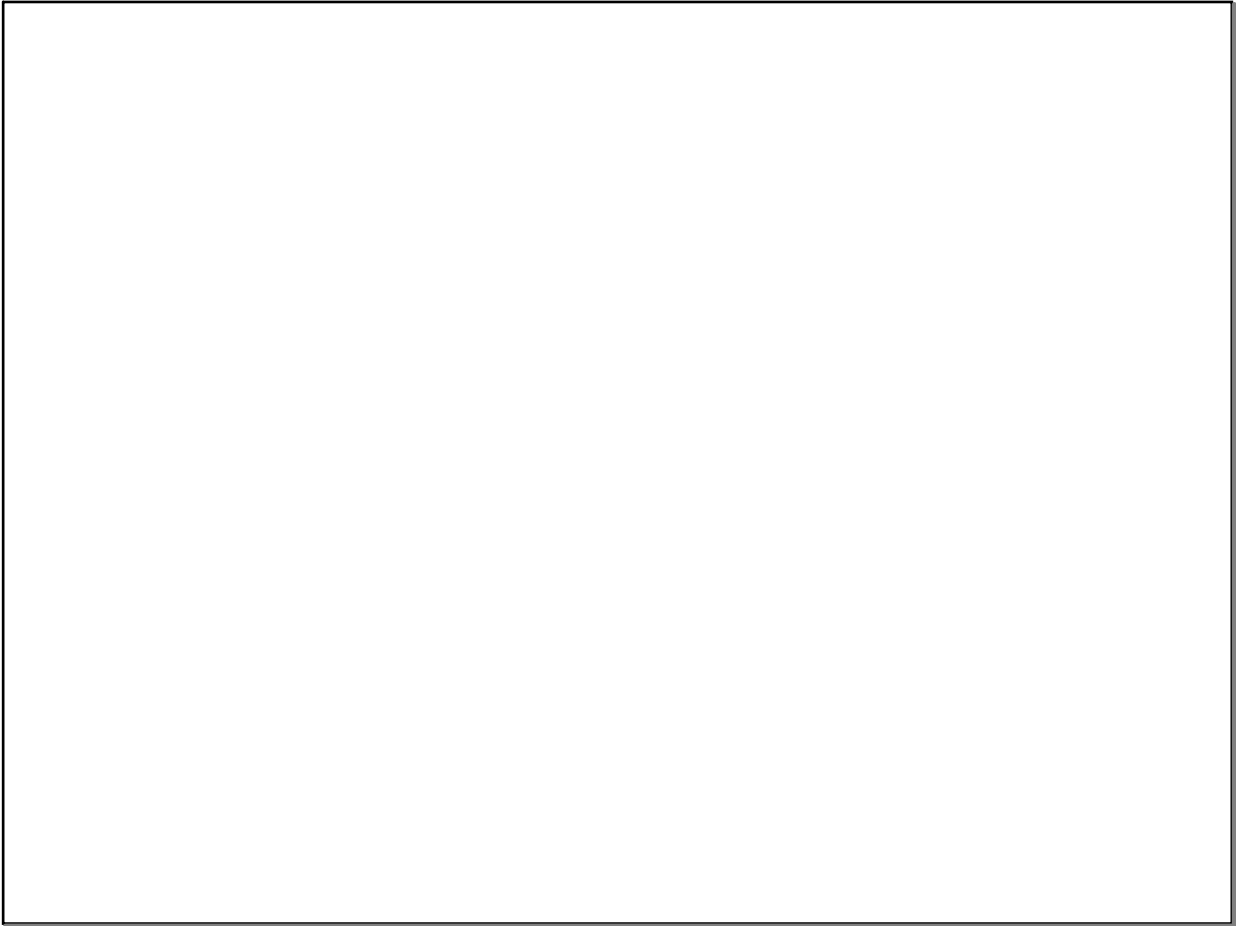

$$\begin{array}{r} 4x - 10 = 12 \\ \hline 4x = 22 \\ \hline x = 22/4 \end{array}$$
